

DuPont™ Krytox® Products for Corrugator Service

PERFORMANCE LUBRICANTS

DuPont™ Krytox® PFPE/PTFE greases have become the corrugator industry standard for lubricating bearings on heated rolls in single facers and associated equipment. Krytox® lubricants help eliminate bearing lubrication as a cause of premature corrugator roll failures. Corrugator roll changes are significantly easier and quicker on single facers lubricated with Krytox® grease.

The DuPont corrugator grease line includes:

- **Krytox® Corrugator 226 FG, 227 FG Greases**—The standard in PFPE/PTFE greases, recognized by OEM and operator alike as the premium performing high temperature grease. These products are NSF H-1 Food Grade certified, providing safe, non-toxic and inert performance in food-related operations.
- **Krytox® SR Greases**—Nitrite-free PFPE/PTFE greases based on a patented soluble additive that improves productivity of corrugator single facers. Feature anticorrosion performance and significant load-carrying ability, allowing hotter, faster and longer performance between roll changes.
- **Krytox® AG Greases**—Anticorrosion greases with an organic rust inhibitor.

Krytox® SR and AG greases can be mixed with Krytox® Corrugator 226/227 with no negative impact on performance, additives or thickeners. Do not mix Krytox® with other greases. They may contain incompatible additives.

DuPont offers corrugators a series of solvents designed to make roll changes — and the time consuming cleanup of bearings and bearing houses — faster and easier.

- **PFPE Solvent**—This solvent is specifically designed to dissolve PFPE oils and greases, where cleaning of hydrocarbon-based lubricants or preservatives is not required.
- **HC Plus Cleaner**—This is a formulation of co-solvents designed to clean both PFPE and hydrocarbon lubricants and preservatives from surfaces.

Corrugators choose Krytox® for many reasons:

- Most productive lubrication system for single facer bearings among all paper corrugating plants, equipment OEMs and corrugator roll rebuilders
- Most thermally stable H1 base oil available
- Reduced risk of bearing failure
- Conversion support and PFPE lubrication/application training available
